thecgroup.com

Designed for refining thoracoscopic skills in Video Assisted Thoracic Surgery, the anatomy of the **VATS Trainer with Mimetic Lung** is derived from patient CT dataset. A rigid hemi-thorax shell provides shoulder landmark and access to the skin of the right thorax. Flexible hemi-ribcage is palpable beneath the opaque skin/muscle layer. These replaceable VATS Skins can be incised and support placement of trocars, scopes, and other instrumentation.

Mimetic-tissue lungs are available in Full (#8006) or Collapsed (#8011) versions. These replaceable Lungs contain staple-compatible artery, vein, and bronchus for each of the three lobes. The lung parenchyma may be blunt-dissected to reveal these structures. Vessels are fluid-filled and ooze blood if improperly handled.

(#8005)

VATS Trainer with Mimetic Lung

INCLUDES

- Rigid hemi-thorax shell providing shoulder landmark and access to the skin of the right thorax
- Replaceable Skin (#8007)
- Hemi-ribcage with spreadable ribs
- Trainer base with diaphragm, spine, and fluid drain
- Effluence tray
- 2 units of Replaceable Mimetic Lung Full Lung (#8006) or Collapsed Lung (#8011)
